SINAPSI

Seasonal, Interannual and decadal variability of the Atmosphere, oceans and marine ecosystems

Guest Editor:
Nadia Pinardi

SPECIALS of Climate Research (CR) present important new information on climate phenomena measured and assessed by closely coordinated group efforts. They concentrate on specific research themes or geographic areas.

CR SPECIAL 14 deals with climate variability and its effects on marine ecosystems in the Mediterranean region. The contributions constitute a multidisciplinary study of regional climate impacts over short and long time scales.

Individual articles focus on palaeoclimatology, on physical and chemical characteristics of the water column and of continental shelf sediments, as well as on the effects of climate variability on microalgae, zooplankton and fishes. CR SPECIAL 14 constitutes a stepping stone toward management of the effects of climate change.
