**Fig. S1** Relationship between prevalence of disseminated neoplasia in the Baltic tellin *Limecola balthica* sampled in the Dutch Wadden Sea and the mean density of the bivalve at each sampling location.  $y = 0.35 x$ ;  $R^2 = 0.83$ ;  $p < 0.001$ .

**Fig. S2** Relationship between prevalence of disseminated neoplasia in the Baltic tellin *Limecola bathica* (%) sampled in the Dutch Wadden Sea and the sediment type at each sampling location.
