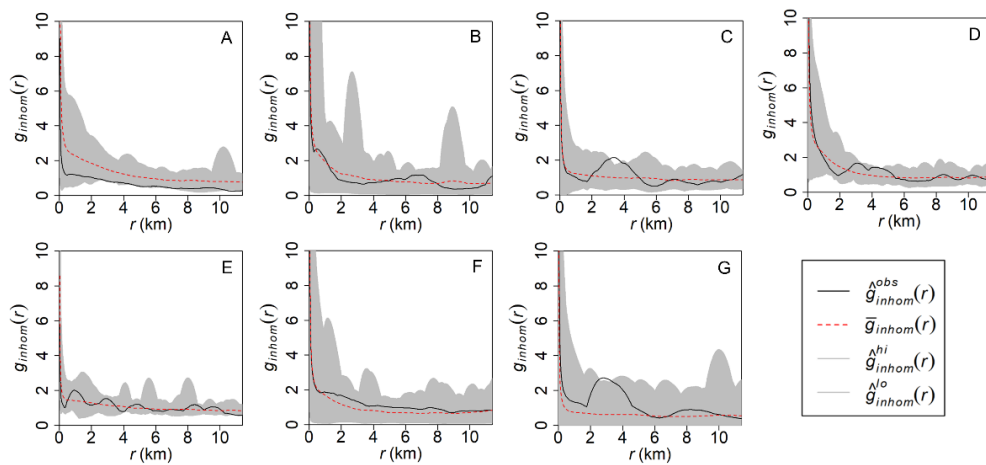

Figure S1. Goodness of fit tests for white-sided dolphin full models. Monte Carlo pointwise envelopes for 99 fitted model simulations of the pair correlation function are shown. Tests indicate acceptable model fit for all months, with slight deviations in June and October.

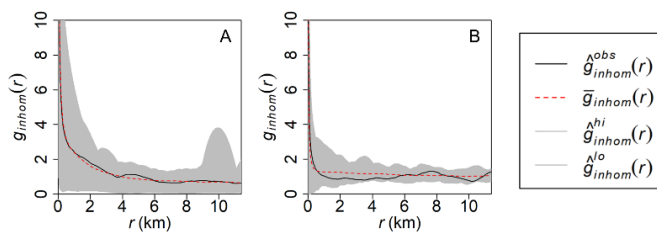

Figure S2. Goodness of fit tests for harbor porpoise full models. Monte Carlo pointwise envelopes for 99 fitted model simulations of the pair correlation function are shown. Tests indicate acceptable model fit for all months.

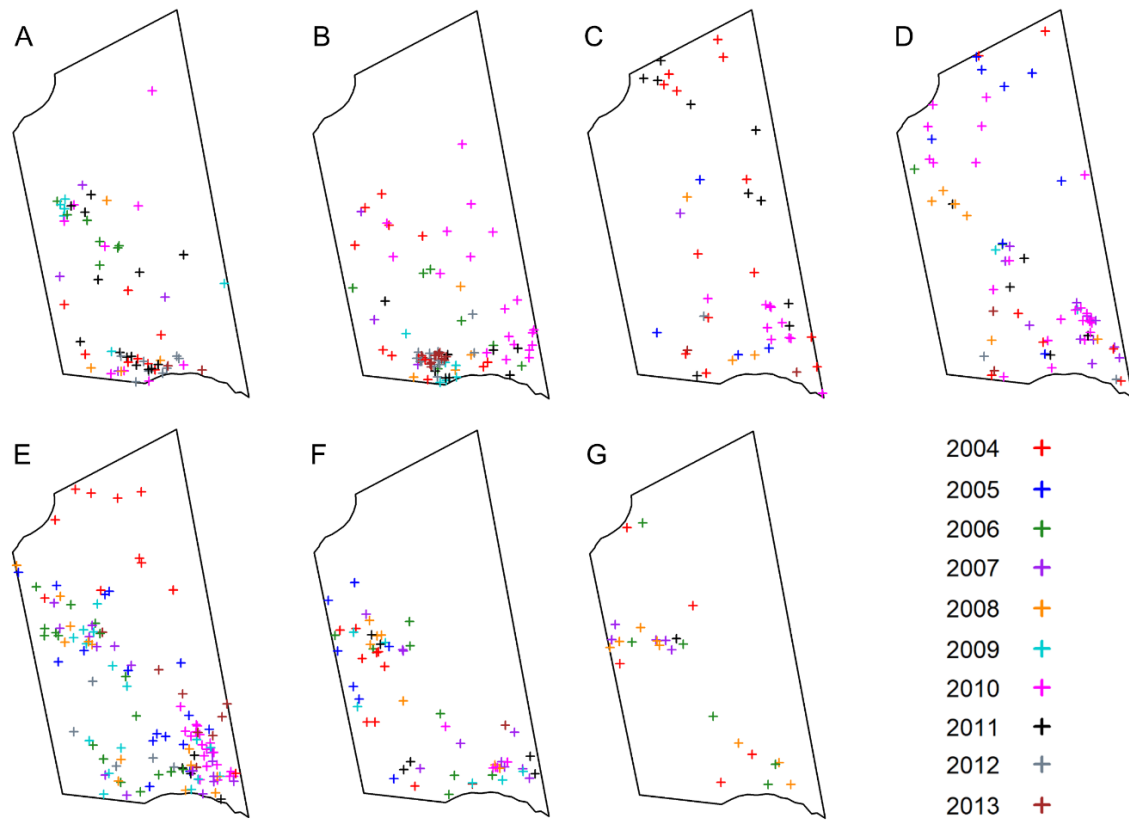

Figure S3. Monthly sightings of white-sided dolphins plotted by year.

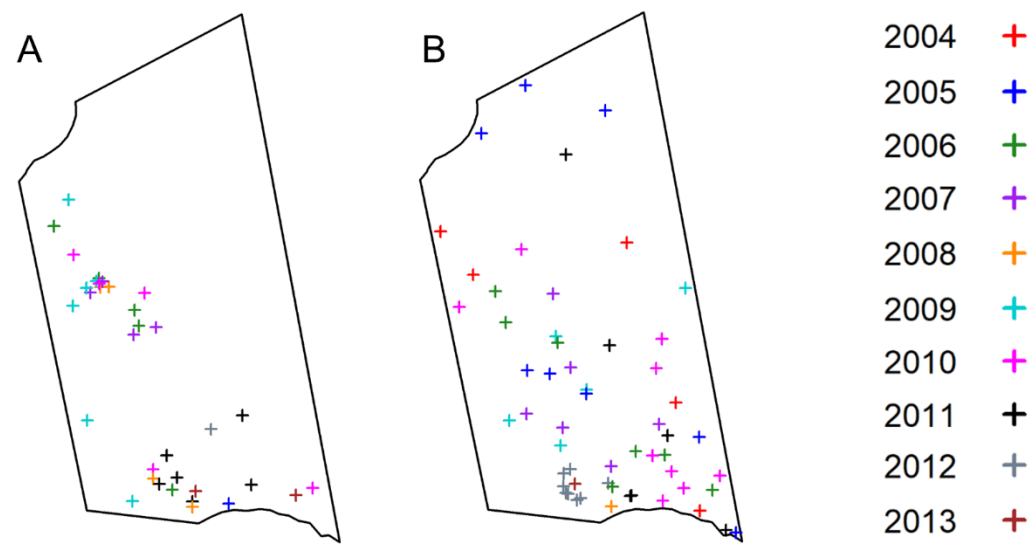

Figure S4. Monthly sightings of harbor porpoise plotted by year.
