Table S2. Boosted Regression Trees of body condition performed for recruits and juveniles in the three study areas. Bold characters indicate the best model selected for each area and ontogenetic stage. n: number of individuals; model: model notation; tc: tree complexity; lr: learning rate; bag: bag fraction; num_var: number of variables; num_trees: number of trees; mean_total_dev: mean total deviance; mean_resid_dev: mean residual deviance; estimated_cv_dev: estimated coefficient of variation of the deviance; se: standard error; %deviance: percentage of deviance explained.
