- On page 304, the top left panel of Fig. 3 contained the wrong data. The complete corrected figure and caption are given below.

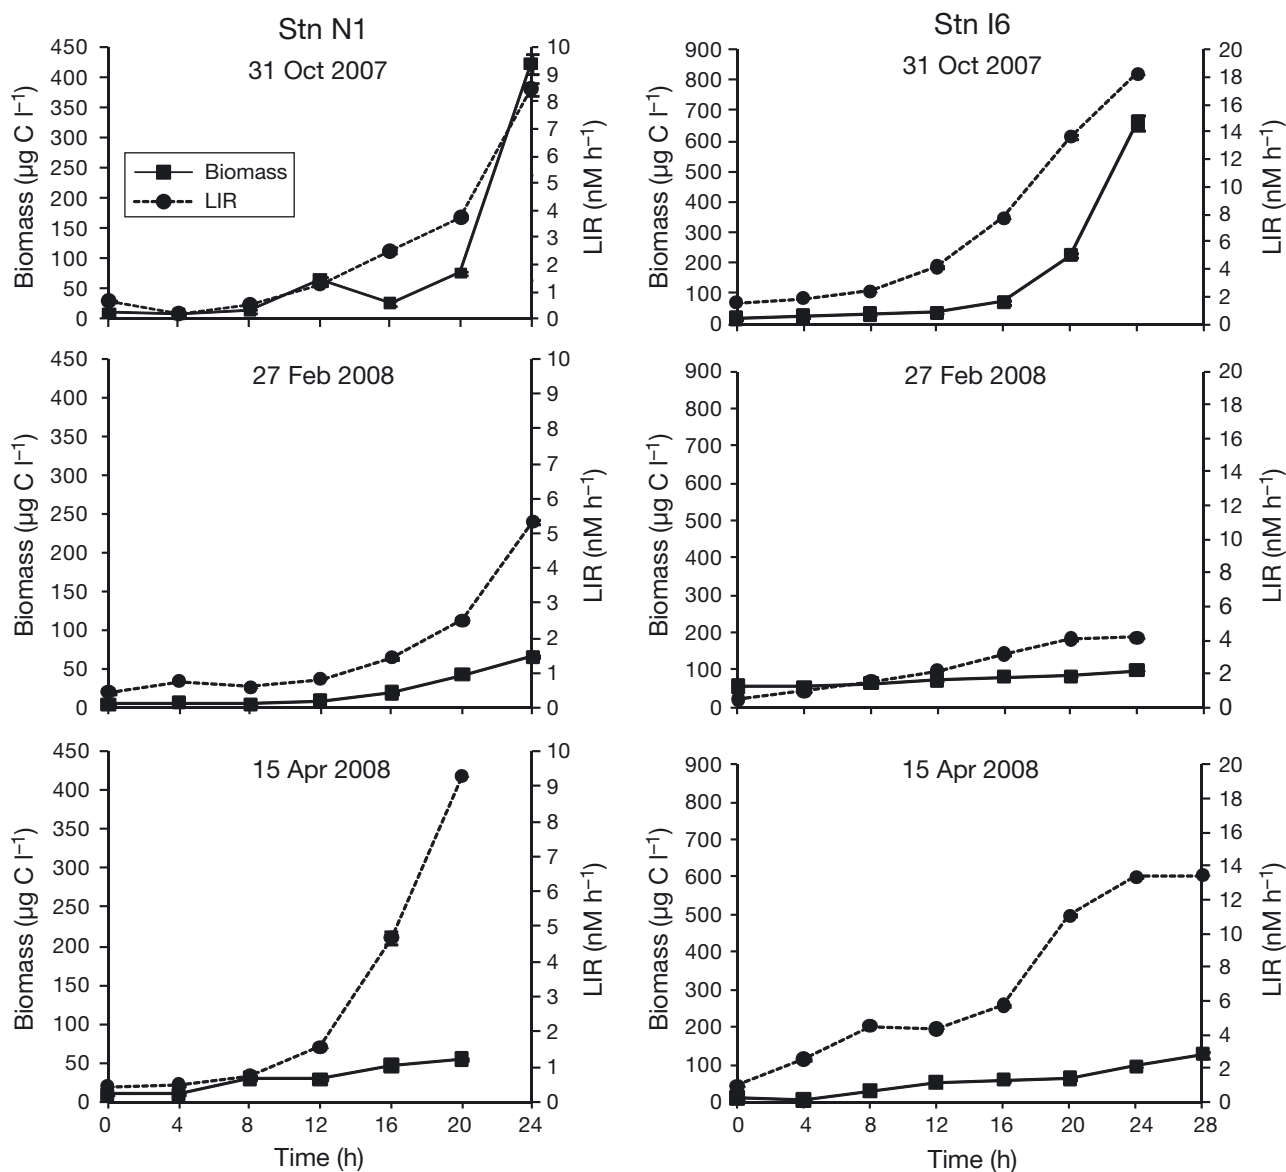

Fig. 3. Measurements of biomass (10^8 pg C cell⁻¹) and leucine incorporation rate (LIR) (nM h^{-1}) over time (0 to 24 h for Stn N1, and 0 to 28 h for Stn I6), used to calculate empirical conversion factors (eCFs) for Stns N1 and I6 for the 3 different sampling dates
