Impact of Climate Change on the Coastal Zone

Proceedings of the
30th Annual Symposium of
the Estuarine and Coastal
Sciences Association

10–13 August, 1999, Hamburg, Germany

Guest Editors:

Jürgen Sündermann, Walter Lenz

CR SPECIAL 10: Production Editor David Kirby

SPECIALS of Climate Research (CR) present important new information on climate phenomena measured and assessed by closely coordinated group efforts. They concentrate on specific research themes or geographic areas.

CR SPECIAL 10 concentrates on coastal zones, including estuaries. It reflects the range of studies currently conducted and it emphasises the need for more knowledge on physical, chemical and ecological interrelationships.

Important information is provided for achieving improvements in predicting the consequences of

climate change, with far-reaching implications for users of marine and estuarine waters.

The symposium participants underline the significance of multi- and cross-disciplinary co-operation for making progress in the analysis and understanding of climate-induced modifications affecting the hydrography (including sea-level rises), geomorphology and ecology of coastal systems. They present new facts relevant to social science, economics and environmental management.
