Integrating science, policy, and community

CLIMAS

THE UNIVERSITY OF ARIZONA

SPECIALS of Climate Research (CR) present important new information on climate phenomena measured and assessed by closely coordinated group efforts. They concentrate on specific research themes or geographic areas.

CR SPECIAL 12 focusses on climate phenomena, and the vulnerability of the southwest United States. CLIMAS (Climate Assessment Project for the Southwest) involves a continuing program drawing primarily from participatory research efforts. It summarizes and

evaluates current knowledge and aims at contributing to a better understanding of regional dynamics and at supporting the work of decision makers. The assessments at hand address local climatic, topographic and geological features; relations between climate dynamics and societies; forecasting potential; variability and vulnerability; water scarcity and drought problems; and they consider adaptional capacities.
