Climate change and the British Uplands

Editors: J. M. Clark, A. V. Gallego-Sala, J. I. House, H. G. Orr, C. Freeman,
I. C. Prentice, P. Smith, M. A. Semenov

SPECIALS of Climate Research (CR) present important new information on climate phenomena measured and assessed by closely coordinated group efforts. They concentrate on specific research themes or geographic areas.

CR SPECIAL 24 on Climate Change and the British Uplands presents a synthesis of current knowledge to help inform policy decisions about safeguarding ecosystem service provision. Work was carried out through a joint project co-funded by the Environment Agency and the Natural Environment Research Council's

QUEST programme, which established a knowledge exchange network combining scientists and policy makers. Topics covered include changing upland climates; mapping blanket peat vulnerability to climate change; measuring and modelling change in peatland carbon stocks; and managing upland ecosystem services under a changing climate.

We are pleased to make the online version of this CR SPECIAL available with Open Access.
