---

*SPECIALS of Climate Research (CR) present important new information on climate phenomena, measured and assessed by closely coordinated group efforts. They concentrate on specific research themes or geographic areas.*

*CR SPECIAL 26 is devoted to the results of the conference 'Climate change: the environmental and socio-economic response in the southern Baltic region' organized by the BALTEX international office and the University of Szczecin, Poland, in May 2009.*

*Climate change projections are required for management and decision making at the regional and local level, to mitigate effects of climate change on the environment and society. As the questions posed to the scientific community are complex and require complex answers, the conference was designed to foster interdisciplinary discussion.*

*We are pleased to make the online version of this CR SPECIAL available with Open Access.*

*Inter-Research*
