- Some details of the RT-PCR assay were given incorrectly on page 159. The correct information is given here (amended text is shown in bold text):

The real-time RT PCR protocol was performed with forward primer TTC CAA ACA ATT CGA GAA GCG, reverse primer **ACC TGC CAT TTT CCC CTC TT** and **MGB probe 6-FAM-CCG GGT AAA GTA TTT GCG TC-MGBNFQ** (all written in 5' to 3' direction) The Qiagen OneStep RT-PCR kit (Qiagen) was used with primer concentrations of 500 nM, probe concentration 300 nM and the following PCR cycle: 30 min at 50°C, 15 min at 95°C, followed by 45 cycles of **30 s** at 94°C and 1 min at 60°C.
