• On page 46, in Fig. 2 the site labels were inadvertently omitted for panels (a), (b), (d) and (e). (These are not identical to those shown for panels (c) and (f))

A corrected figure is shown below with its legend.

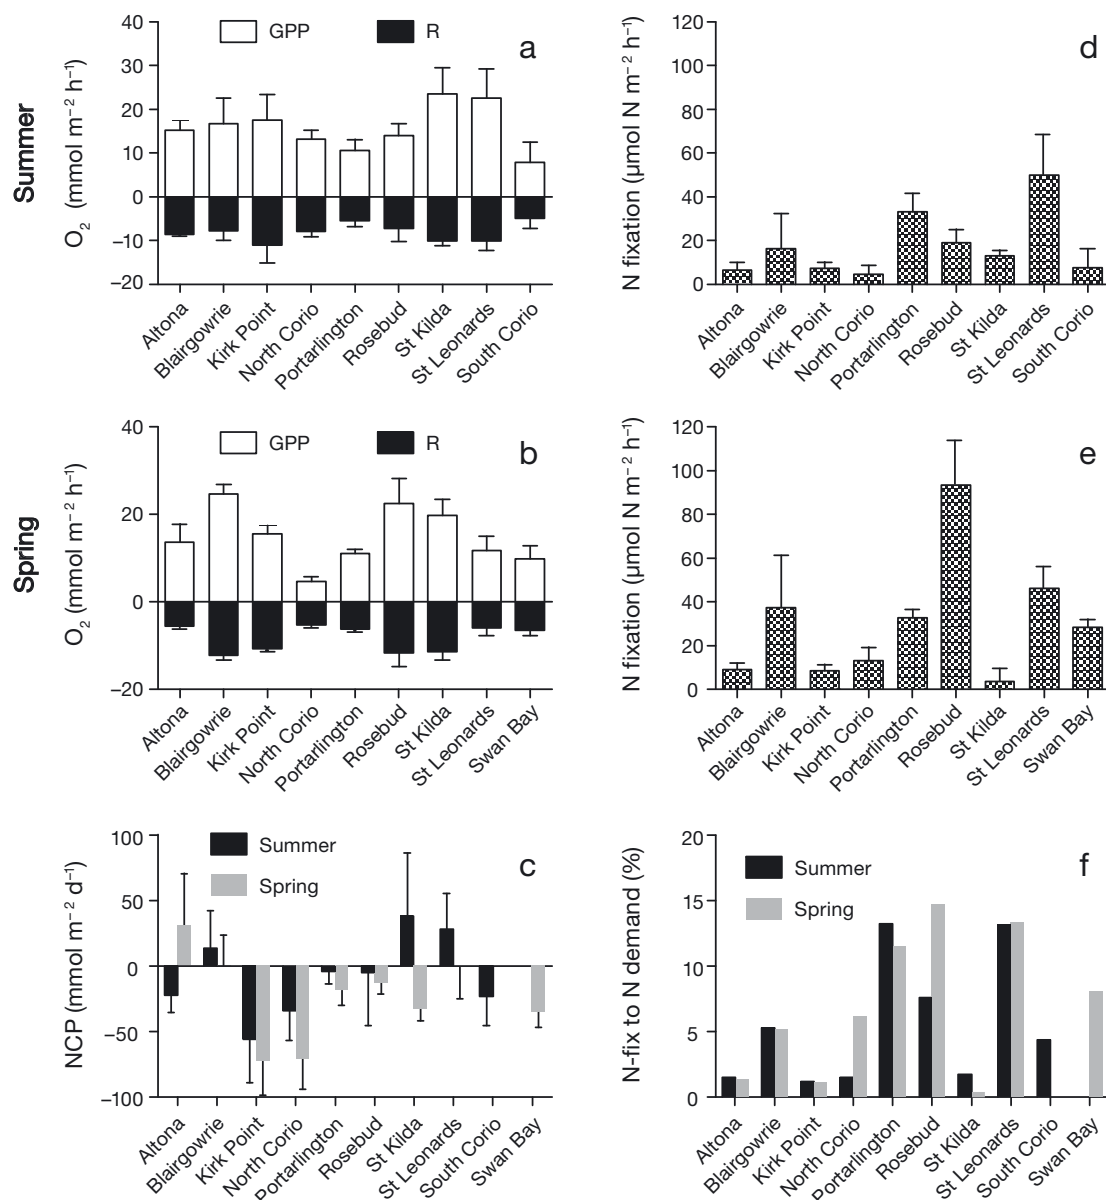

Fig. 2. Rates of gross primary production (GPP) and respiration (R) during (a) summer and (b) spring. (c) Rates of daily net community production (NCP) during both seasons. Nitrogen fixation during (d) summer and (e) spring (mean \pm SD, $n = 4$). (f) Rate of nitrogen fixation as a percent of total estimated nitrogen demand by *Zostera* spp. (see 'Materials and methods' for calculation)
