

Corrigendum

Low lipid and urea effects and inter-tissue comparisons of stable isotope signatures in three nearshore elasmobranchs

- In Fig. 2 on page 236, the equations in both panels did not reflect the current axis orientation. In the legend, 'Grey shaded area represents 95 % confidence intervals' has been changed to 'Grey shaded area represents standard error'.
- The revised figure and its legend are shown below:

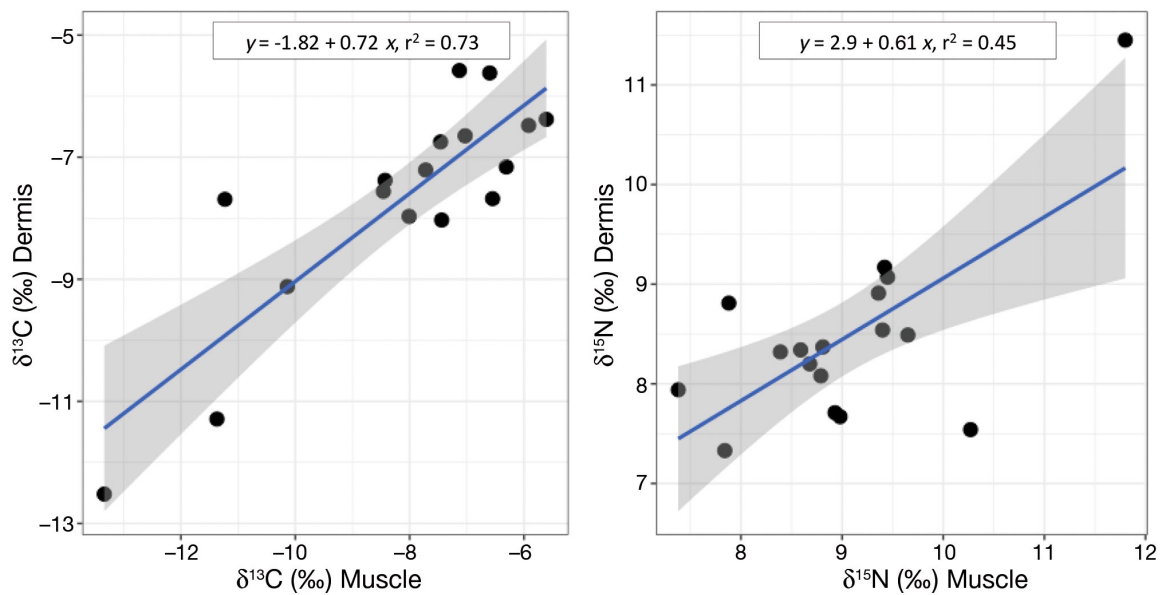

Fig. 2. Linear regressions for stable isotope values generated from chemically extracted dermis and muscle tissue for nurse sharks *Ginglymostoma cirratum* ($n = 17$). Grey shaded area represents standard error, blue line represents line of best fit
