

## Corrigendum

### Respiration rates and active carbon flux of mesopelagic fishes (Family Myctophidae) in the Scotia Sea, Southern Ocean

There was a minor mistake in Figure 1. The data were not correctly coloured for the 2 measurement techniques, direct oxygen consumption experiments, or electron transport system (ETS) measurements. This has been corrected in Fig. 1 below, and does not change any conclusions of the original paper.

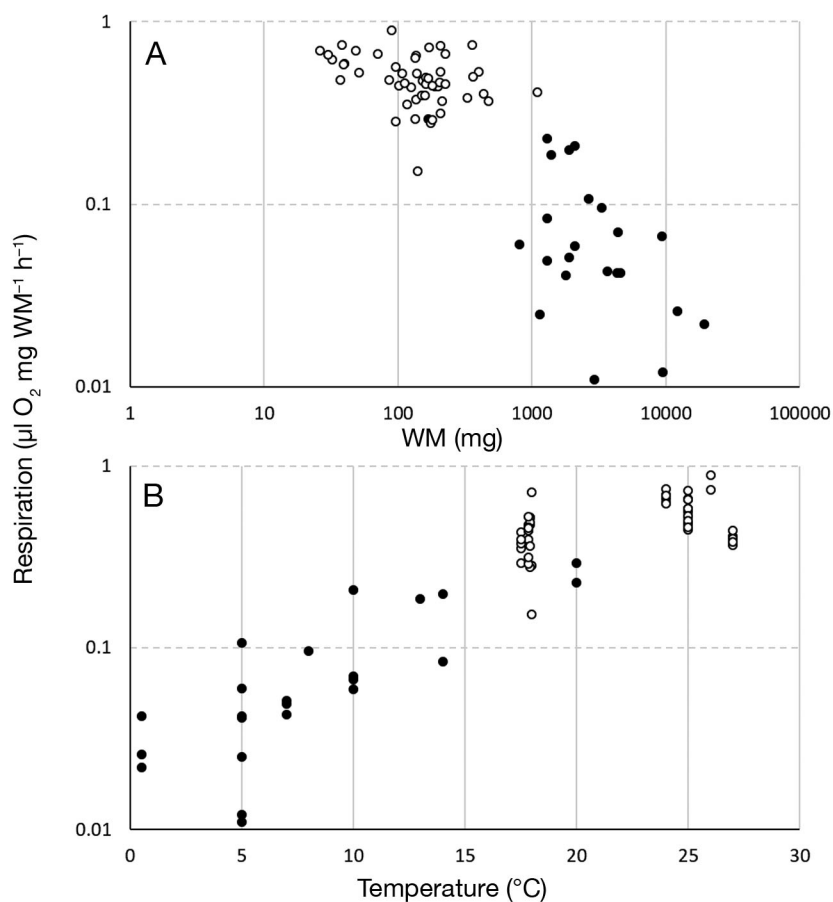

Fig. 1. Literature compilation of respiration rates (mass specific) of myctophid fishes versus (A) wet mass (WM) and (B) temperature. Note the logarithmic scales. (●) Data from direct oxygen consumption experiments; (○) respiration estimated from electron transport system (ETS) measurements

All corrections have been incorporated in the current online version of the article at <https://www.int-res.com/abstracts/meps/v610/p149-162/>
