

## Corrigendum

### Stock structure and effective population size of the commercially exploited gummy shark *Mustelus antarcticus*

- 
- In Section 4 on page 120, we incorrectly cited 2 references in our discussion. Pereyra et al. (2010) and Maduna et al. (2020) should not be included in the following text:

This large-scale dispersal potential is supported by the extent of admixture observed in within-population  $F_{ST}$  results alongside spatial analyses, confirming that the species is adept at dispersing within the ranges of their respective SP or EP group (Fig. 2B). Whilst sex-biased dispersal has been observed to contribute to genetic structuring in some *Mustelus* species (Pereyra et al. 2010, Maduna et al. 2020), we did not find evidence to support this for *M. antarcticus* (Fig. 4).

- The text has been corrected in the online version of the article. Furthermore, the reference for Pereyra et al. (2010) has been removed from the Literature Cited section as it is not cited elsewhere in the article. The new text now reads:

This large-scale dispersal potential is supported by the extent of admixture observed in within-population  $F_{ST}$  results alongside spatial analyses, confirming that the species is adept at dispersing within the ranges of their respective SP or EP group with no sex-bias (Figs. 2B & 4).
