- In Fig. 1A on page 72, the pie chart for Kalmarsund was missing. This has now been amended in the pdf version online.

The correct figure and its legend are given below:

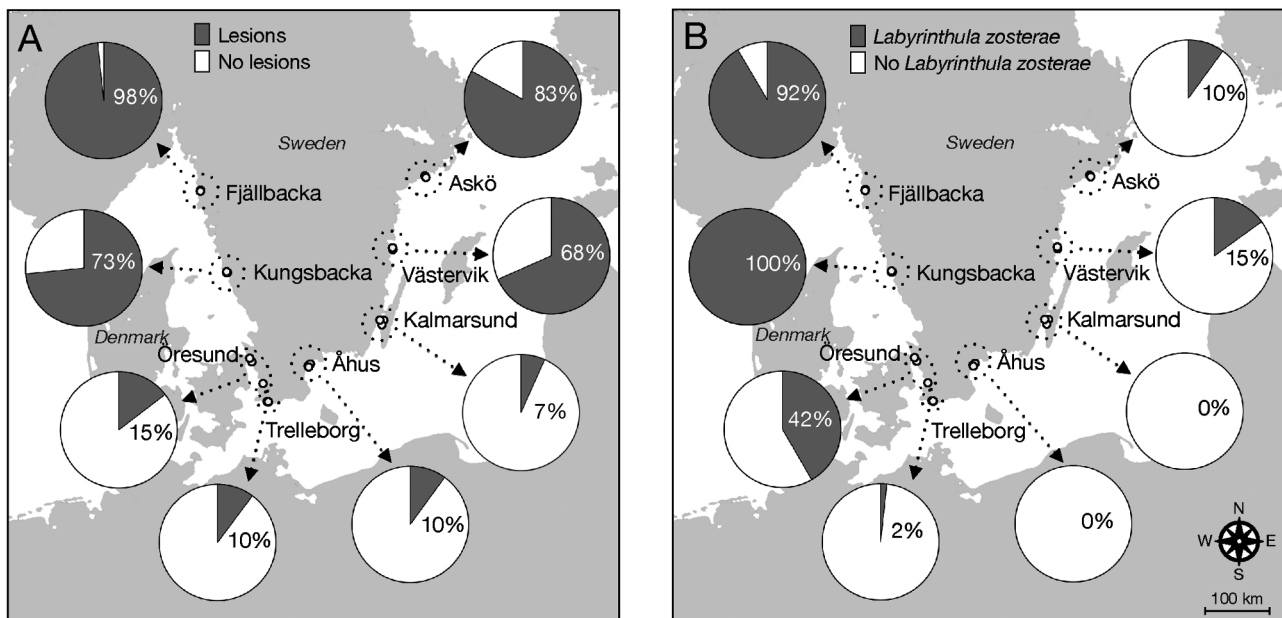

Fig. 1. Field survey. Prevalence of *Labyrinthula zosterae* infection on *Zostera marina* shoots along the Swedish coast, measured as (A) lesion prevalence and (B) *L. zosterae* prevalence. Pie charts show all samples (n = 60) collected from 3 meadows per area. Prevalence values are shown for infected shoots
