

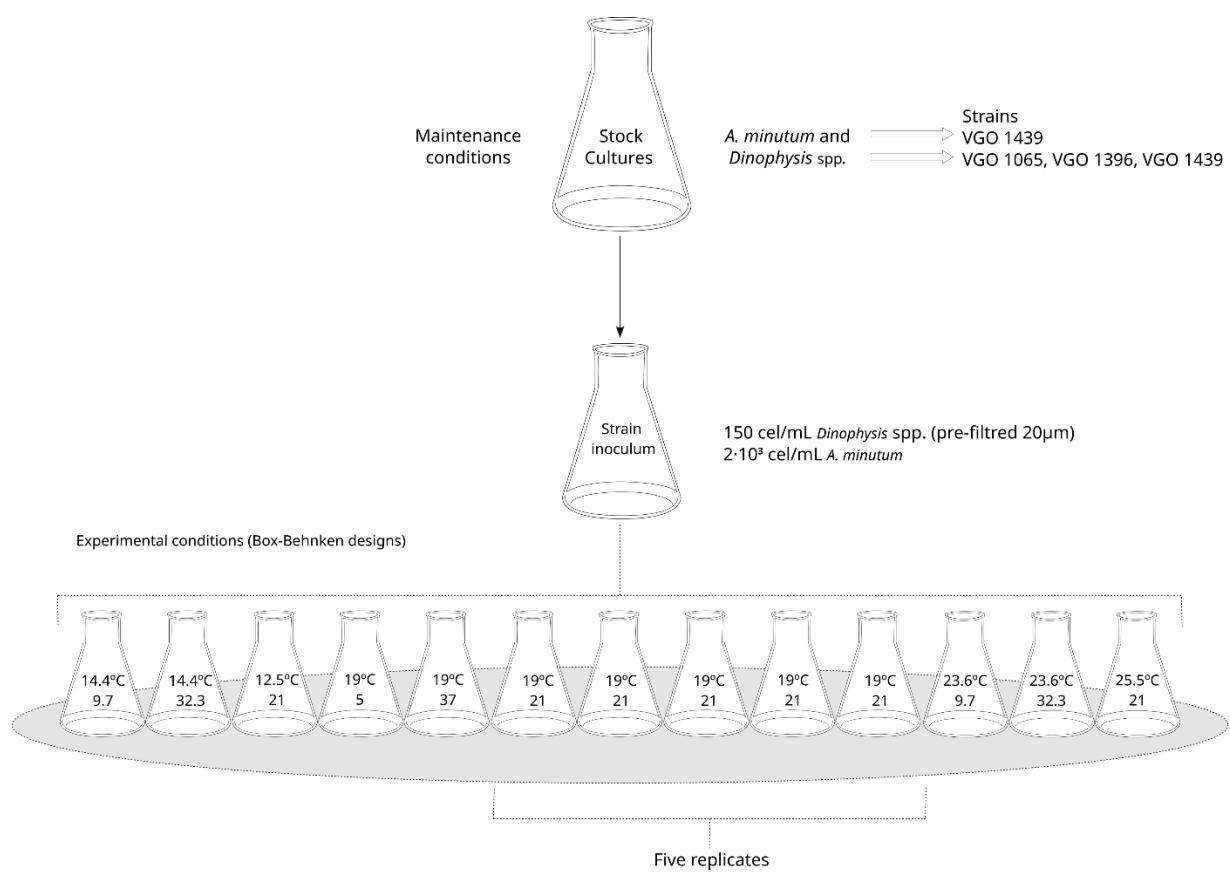

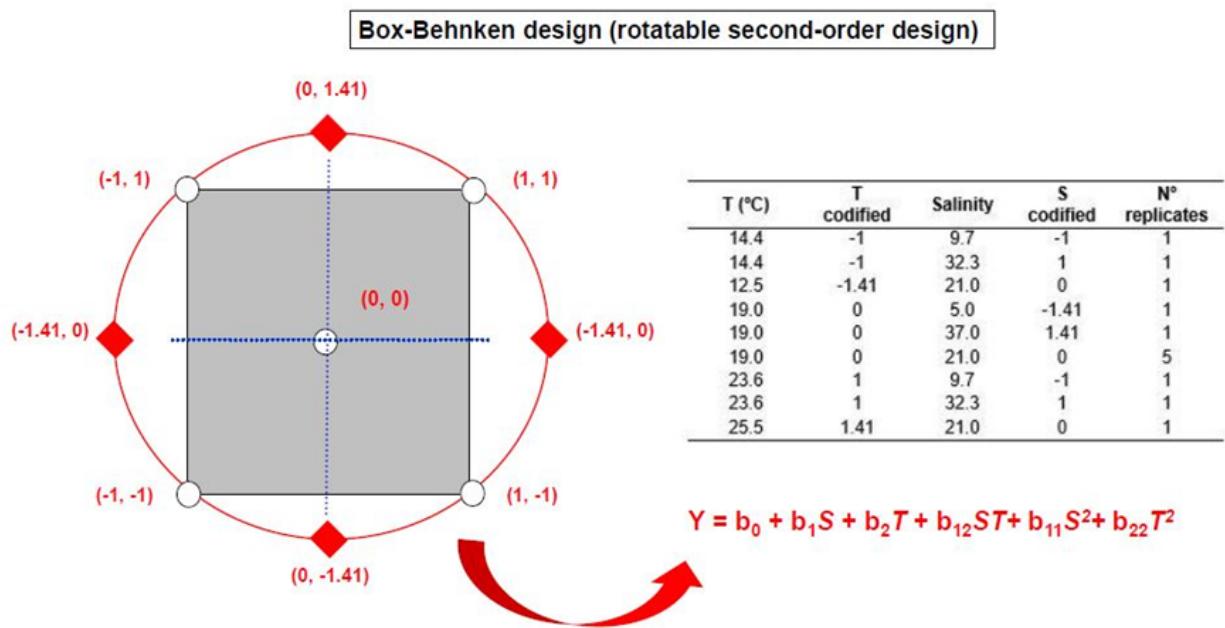

**Figure S1.** Violin plot of a 24 years (1994-2020) time series of temperature ( $^{\circ}\text{C}$ ) and salinity from CTD casts (top 10 m) in Ría de Vigo. Red dots represent outliers. Source: IEO monitoring project RADIALES, Spanish Institute of Oceanography (<https://www.seriestemporales-ieo.net/>).

**Figure S2.** Experimental design scheme

**Figure S3.** Graphical representation of the rotatable second-order design employed to study the effect of temperature and salinity on dinoflagellates growth. The position of factorial (the four white circles at the vertices of the grey square), axial (red squares) and centre points are shown in codified values. Summary table with the 13 experimental treatments and the type of polynomial equation obtained.

**Table S1.** Experimental domain and codification of independent variables in the factorial rotatable design.

Coded values	Natural values	
	T (°C)	S
-1.41	12.5	5.0
-1	14.4	9.7
0	19.0	21.0
+1	23.6	32.3
+1.41	25.5	37.0

Codification:  $V_c = (V_n - V_0)/\Delta V_n$

Decodification:  $V_n = V_0 + (\Delta V_n \times V_c)$

$V_n$  = natural value of the variable to codify

$V_c$  = codified value of the variable

$V_0$  = natural value in the centre of the domain

$\Delta V_n$  = increment of  $V_n$  for unit of  $V_c$

**Table S2.** Fisher F test ( $\alpha=0.05$ ). mean square ratios used to validate the model consistency.

$F_{den}^{num}$  are the theoretical values to  $\alpha=0.05$  with the corresponding degrees of freedom for numerator (num) and denominator (den).

**the model is acceptable when**

---

$$F1 \leq F_{den}^{num}$$

$F1$  = Model / Total error

---

$$F2 = (\text{Model} + \text{Lack of fitting}) / \text{Model} \quad F2 \leq F_{den}^{num}$$

---

$$F3 = \text{Total error} / \text{Experimental error} \quad F3 \leq F_{den}^{num}$$

---

$$F4 = \text{Lack of fitting} / \text{Experimental error} \quad F4 \leq F_{den}^{num}$$

**Table S3.** Changes in cell density (cells ml<sup>-1</sup>) of *Dinophysis* (*D. acuta*, *D. caudata* and *D. acuminata*) under different temperature and salinity combinations. Initial concentration (Init. Conc.).
