Supplement. Mean 500hPa Geopotential Height anomaly patterns for the years with highest and lowest precipitation
Fig. S1. S-mode factor analysis: spatial distribution of winter 500 hPa geopotential height anomalies (gpm) for the 6 years with the highest and the lowest factor scores. Isopleths of negative anomalies are dashed
Fig. S2. S-mode factor analysis: as in Fig. S1, but for spring
Fig. S3. S-mode factor analysis: as in Fig. S1, but for autumn
