The following supplement accompanies the article

Skills of different hydrographic networks in capturing changes in the Mediterranean Sea at climate scales

J. Llasses*, G. Jordà, D. Gomis

Fig. S1. Time evolution of the basin averaged vertical profiles of temperature (left) and salinity (right)

Fig. S2. Time evolution of the density threshold used in the computation of the dense water formation rates (see main text for details)
Fig. S3. Same as Figure 5 in the main text, but considering the period 1962-2000.
