Appendix 1. The site matrix shows variable sites of 134 Cory's shearwater mitochondrial control region haplotypes. Dots indicate identity with haplotype 1. Variable site position refers to location relative to the beginning of the control region.

Appendix 4. Ringing (locality and year 1) and recoveries (locality and year 2), and ringing age of Cory's shearwaters recovered away from their breeding sites. Geographic coordinates: Latitude (+ North and – South) and Longitude (+ East and – West), and the approximate distance (km) covered by dispersing birds is also indicated.
