Supplement. Two tables presenting additional systematic and distributional sources and the complete set of 1443 records in our survey, followed by the literature cited in these tables.

Table S1. Supplemental sources providing additional systematic (S) and distributional (D) information to that in Tables 1, 2, and S2. These sources also augment information provided by WORMS/OBIS/NAS. The current name and the date (yr-mm-dd) of entry or last change at the World Register of Marine Species (WORMS) is reported here. See Table S2 for more information regarding these fouling community species

Table S2. Fouling community invertebrates along the east coast of the USA recorded in the literature from 1874 to 2009. This is a complete list of all 1443 records of 317 species in our survey. The reported name is followed by the current name, date (yr-mm-dd) of entry or last change at the World Register of Marine Species (WORMS), reported location, east coast range (given by state and based on WORMS, the Ocean Biogeographic Information System [OBIS], and selected references from the systematics literature), and source references in chronological order for each state. WORMS and OBIS are accessed at www.marinespecies.org and www.iobis.org, respectively. Distributional range information is not provided for multi-species complexes. Abbreviations are as follows: NE - New England, SNE- Southern New England, LIS - Long Island Sound, ME - Maine, NH - New Hampshire, MA - Massachusetts, RI - Rhode Island, CT - Connecticut, NY - New York, NJ - New Jersey, DE - Delaware, MD - Maryland, VA - Virginia, NC - North Carolina, SC - South Carolina, GE - Georgia, FL - Florida. Readers are encouraged to contact the authors regarding queries, comments, corrections, and future updates
