Fig. S1. $^1$H nuclear magnetic resonance spectrum of antifungal compound α-dimorphecolic acid (500 MHz; CDCl$_3$) isolated from *Spartina alterniflora*
Fig. S2. COSY nuclear magnetic resonance spectrum of antifungal compound α-dimorphecolic acid (500 MHz; CDCl₃) isolated from *Spartina alterniflora*
Fig. S3. HSQC nuclear magnetic resonance spectrum of antifungal compound α-dimorphelic acid (500 MHz; CDCl₃) isolated from *Spartina alterniflora*
Fig. S4. HMBC nuclear magnetic resonance spectrum of antifungal compound α-dimorphecolic acid (500 MHz; CDCl₃) isolated from *Spartina alterniflora*
Fig. S5. High-resolution mass spectrum of antifungal compound α-dimorphecolic acid isolated from *Spartina alterniflora* extracts (negative ion electrospray). The observed molecular ion [M-H]⁻ at specific mass-to-charge ratio 295.2277 supports a molecular formula of $C_{18}H_{32}O_3$. 
Fig. S6. $^1$H nuclear magnetic resonance spectrum of antigrazer compound orientin (500 MHz; 3:1 MeOD/D$_2$O) isolated from *Spartina alterniflora*
Fig. S7. COSY nuclear magnetic resonance spectrum of antigrazer compound orientin (500 MHz; 3:1 MeOD/D$_2$O) isolated from *Spartina alterniflora*
Fig. S8. HSQC nuclear magnetic resonance spectrum of antigrazer compound orientin (500 MHz; 3:1 MeOD/D$_2$O) isolated from *Spartina alterniflora*
Fig. S9. HMBC nuclear magnetic resonance spectrum of antigrazer compound orientin (500 MHz; 3:1 MeOD/D$_2$O) isolated from *Spartina alterniflora*
Fig. S10. High-resolution mass spectrum of antigrazer compound orientin isolated from *Spartina alterniflora* extracts (positive ion electrospray). The observed molecular ion [M+H]$^+$ at specific mass-to-charge ratio 449.1076 supports a molecular formula of $C_{21}H_{20}O_{11}$.
