Supplement. Additional data

Fig. S1. Hourly thermal (°C) experience recorded from 50 individual sockeye salmon from time of release in Discovery Passage to Fraser River entry. Individual tag numbers (tag no.) and study year for each fish are indicated in the upper-right corner of the plot. Individual plots are sorted by study year: fish from 2006 are presented first followed by fish from 2010. Within each study year, individual plots are sorted vertically within columns by date of release, from earliest to latest. Light grey shaded regions indicate nighttime.
