Marine Ecology Progress Series 550: 1–24 (2016)

Table S1. Station locations and types of isotope samples collected. The majority of samples were collected during the 2012 (Colville Plume [CP] region) and 2013 (Camden Bay [CB], Outer Mackenzie Plume [OMP], and Inner Mackenzie Plume [IMP] regions) field seasons for the BOEM-funded U.S.-Canada Transboundary Project. Stations associated with this project were arranged in transects perpendicular to shore, and have been listed as such here, though transects were pooled for analysis. Additional sPOM samples were collected during the 2013 Canada BREA program (indicated with *), and ice POM samples were collected from sea ice cores outside of Barrow in 2014. Depths listed were target depths, actual sampling depth for bottom trawls was 8.7% less than target depth on average.

Year	Region	Transect	Station information				Isotope samples collected
