Marine Ecology Progress Series 574: 127–140 (2017)

Fig. S1. Depth and temperature versus time for 7 recovered Atlantic salmon from the River Alta tagged with high temporal resolution DSTs released in 2015. The depth of the mixed layer (solid line), calculated for a convex polygon encompassing all pop-up locations for the Alta salmon tagged with high resolution DSTs, has been superimposed (obtained from the Operational Mercator Global Ocean Analysis and Forecast System through the Copernicus Marine Environment Service).
