

## Supplementary Information

Table S1. Generated additive models generated for the selection of the best fit model relating presence and absence of manta rays in the Paranaguá Estuarine Complex with environmental and temporal variables. + marks the variables added to the models. In bold the selected model. WindDir = wind direction, Effort= Daily effort, MoonIllum = Moon Ilumination, SST = 8-day sea surface temperature, WindVel = Wind velocity, df = degree of freedom, AICc = corrected Akaike's information criterion,  $\Delta\text{AIC}$  = AIC delta value, s = smooth function, f = factor.

### PRESENCE AND ABSENCE MODEL SELECTION

| Model    | f(Year) | s(WindDir) | s(Effort) | s(MoonIllum) | s(SST) | s(WindVel) | df       | AICc         | $\Delta\text{AIC}$ |
|----------|---------|------------|-----------|--------------|--------|------------|----------|--------------|--------------------|
| <b>1</b> |         |            |           | +            |        |            | <b>7</b> | <b>182.1</b> | <b>0.00</b>        |
| 2        |         |            |           | +            |        | +          | 7        | 182.1        | 0.00               |
