

Supplementary material

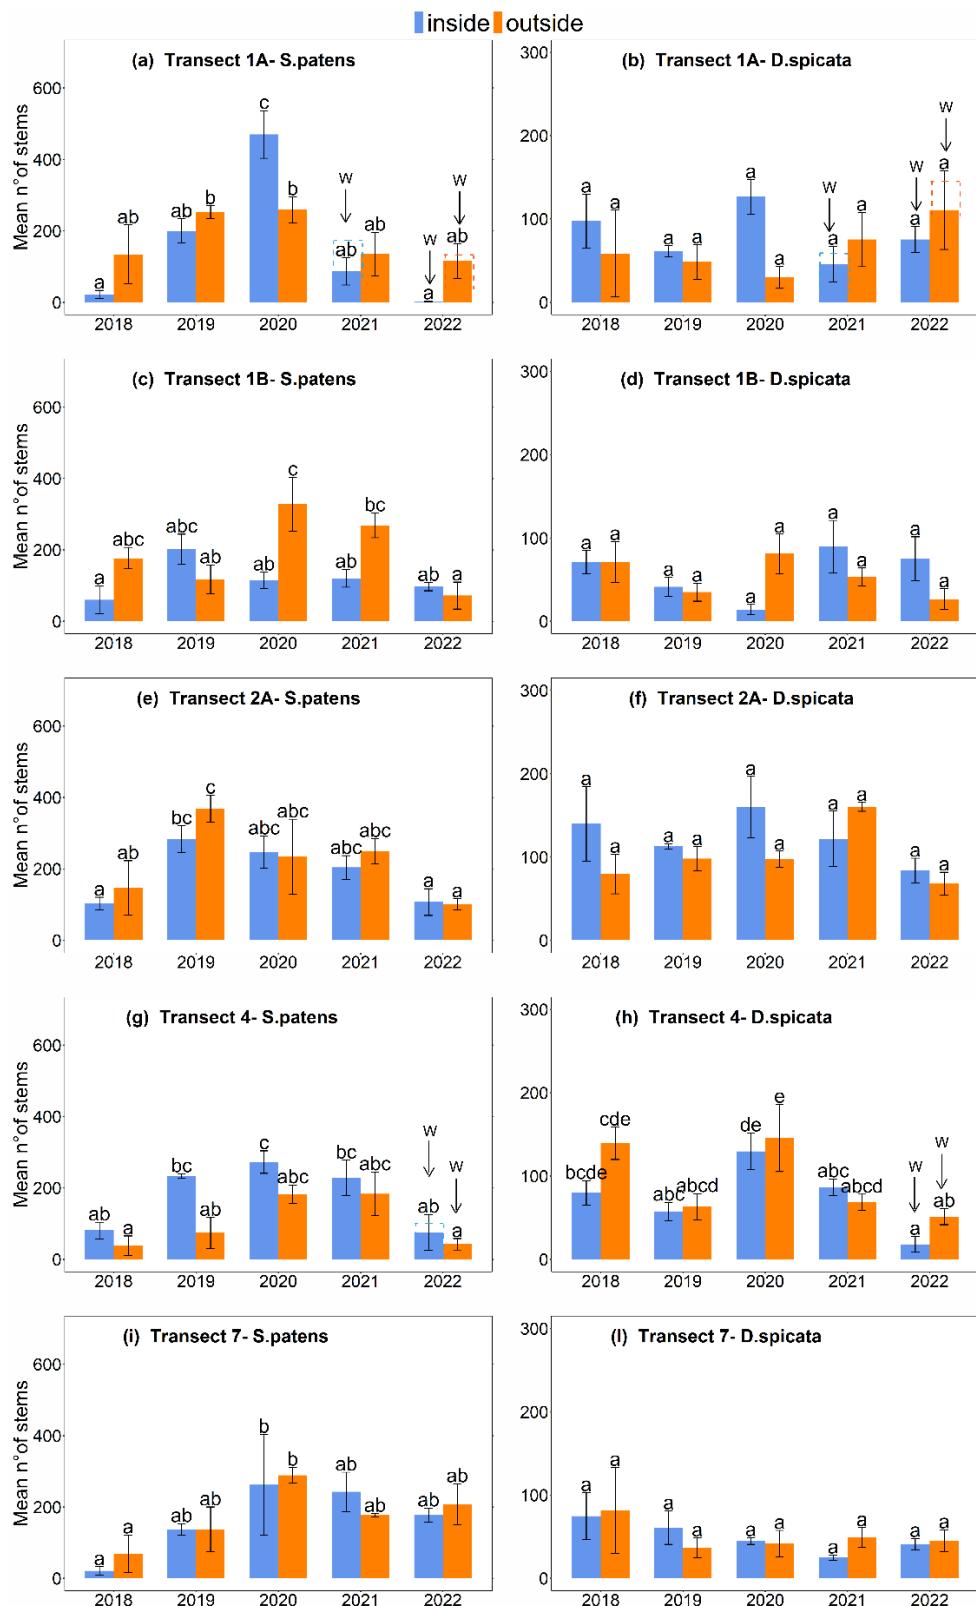

Figure S1a: Number of stems of *Spartina patens* and *Distichlis spicata* inside and outside the sediment 3 patches over the years. Letters over the bars identify post-hoc Tukey test results. W identifies wrack presence and dotted lines correspond to the values without plots affected by wrack.

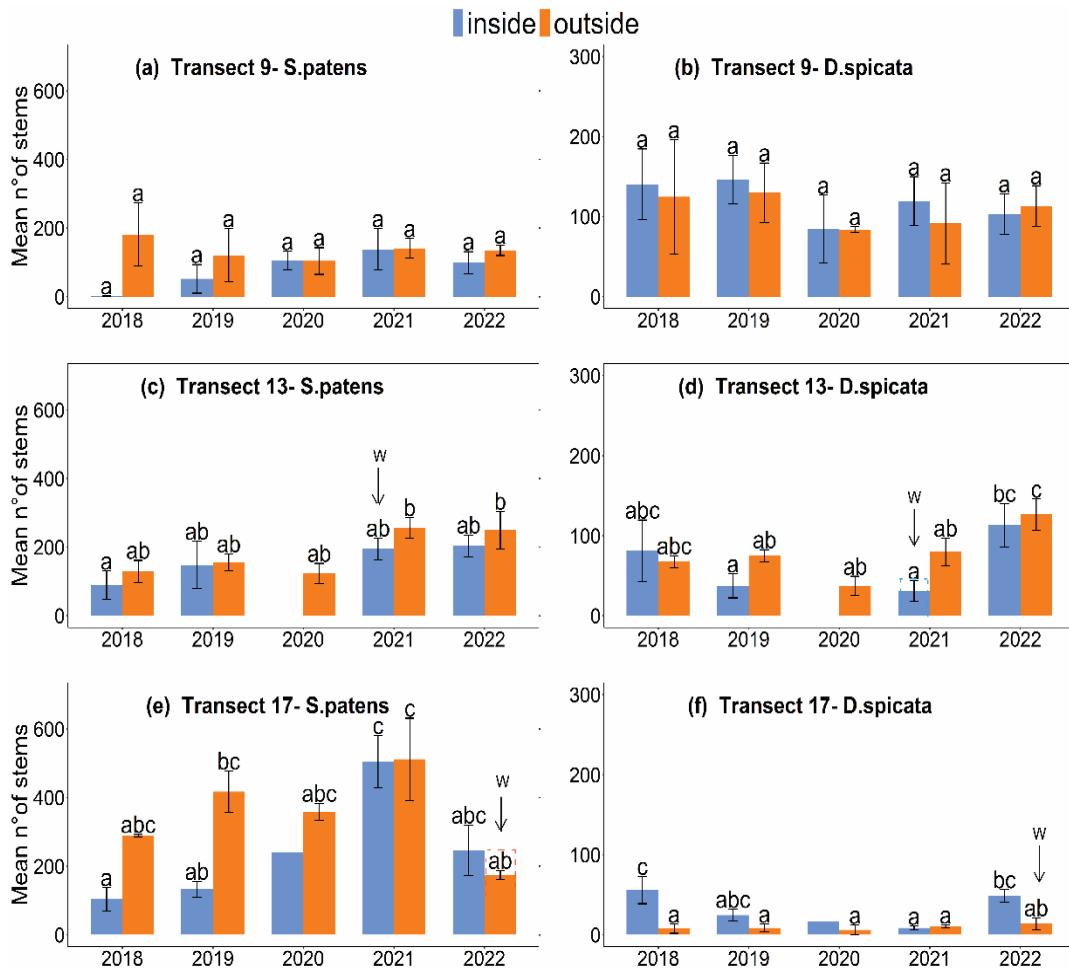

Figure S1b: Number of stems of *Spartina patens* and *Distichlis spicata* inside and outside the sediment patches over the years. Letters over the bars identify post-hoc Tukey test results. W identifies wrack presence and dotted lines correspond to the values without plots affected by wrack.

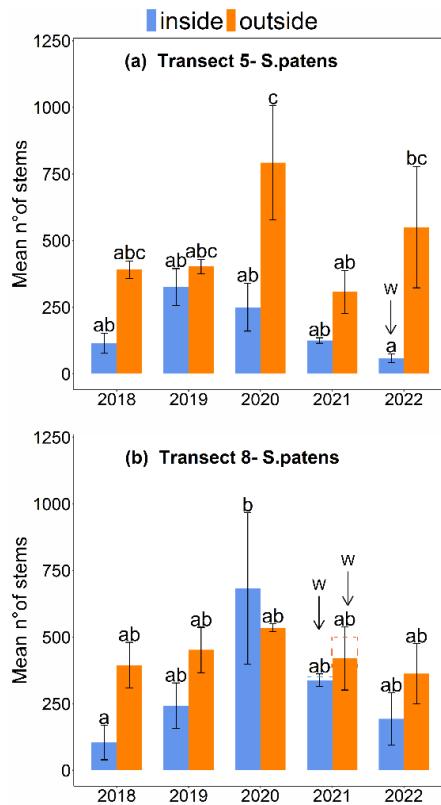

Figure S2: Number of stems of *Spartina patens* inside and outside the patches 5 and 8. Letters over the bars identify post-hoc Tukey test results. W identifies wrack presence and dotted lines correspond to the values without plots affected by wrack.

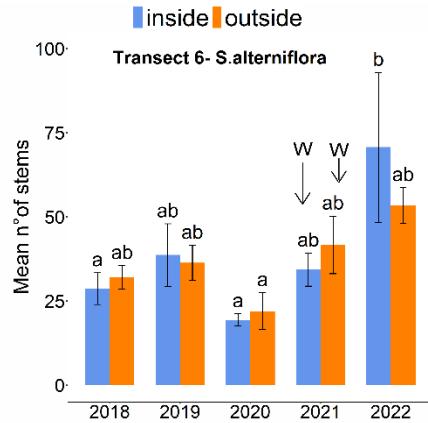

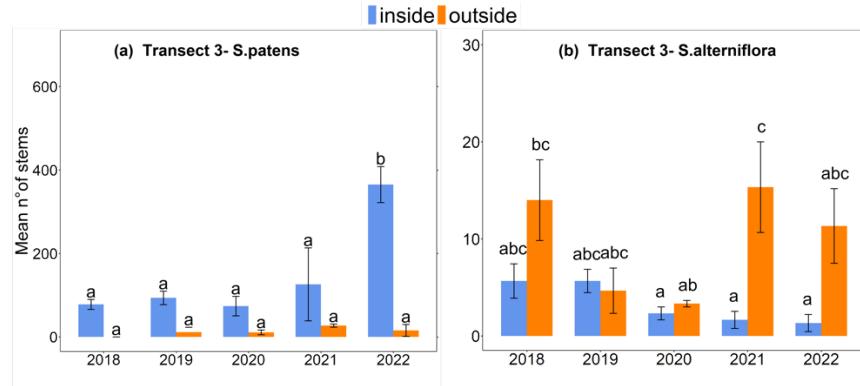

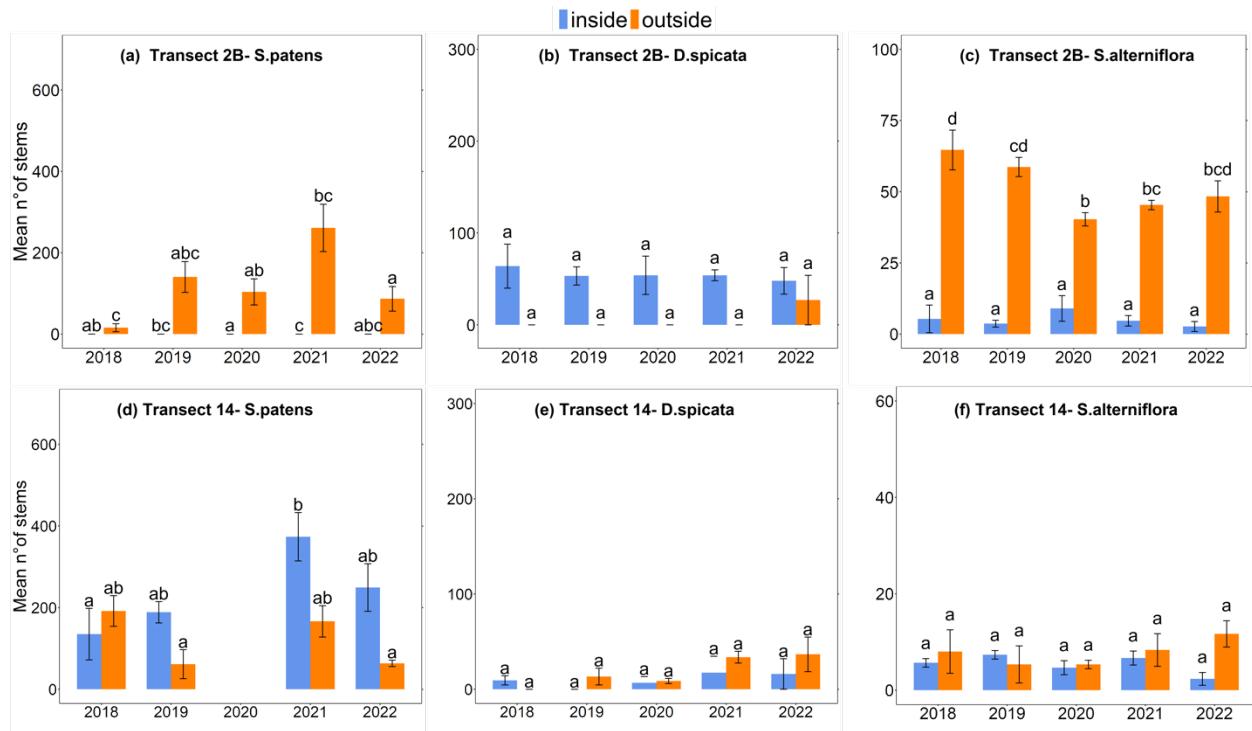

Figure S3: Number of stems of *Spartina alterniflora* inside and outside the patch in transect 10 over the years. Letters over the bars identify post-hoc Tukey test results. W identifies wrack presence and dotted lines correspond to the values without plots affected by wrack.

*Figure S4: Number of stems of *Spartina patens* and *Spartina alterniflora* inside and outside the patch in transect 3. Letters over the bars identify post-hoc Tukey test results. W identifies wrack presence and dotted lines correspond to the values without plots affected by wrack.*

*Figure S5: Number of stems of *Spartina patens*, *Distichlis spicata* and *Spartina alterniflora* inside and outside the sediment patch of transect 2B and 14. Letters over the bars identify post-hoc Tukey test results. W identifies wrack presence and dotted lines correspond to the values without plots affected by wrack.*

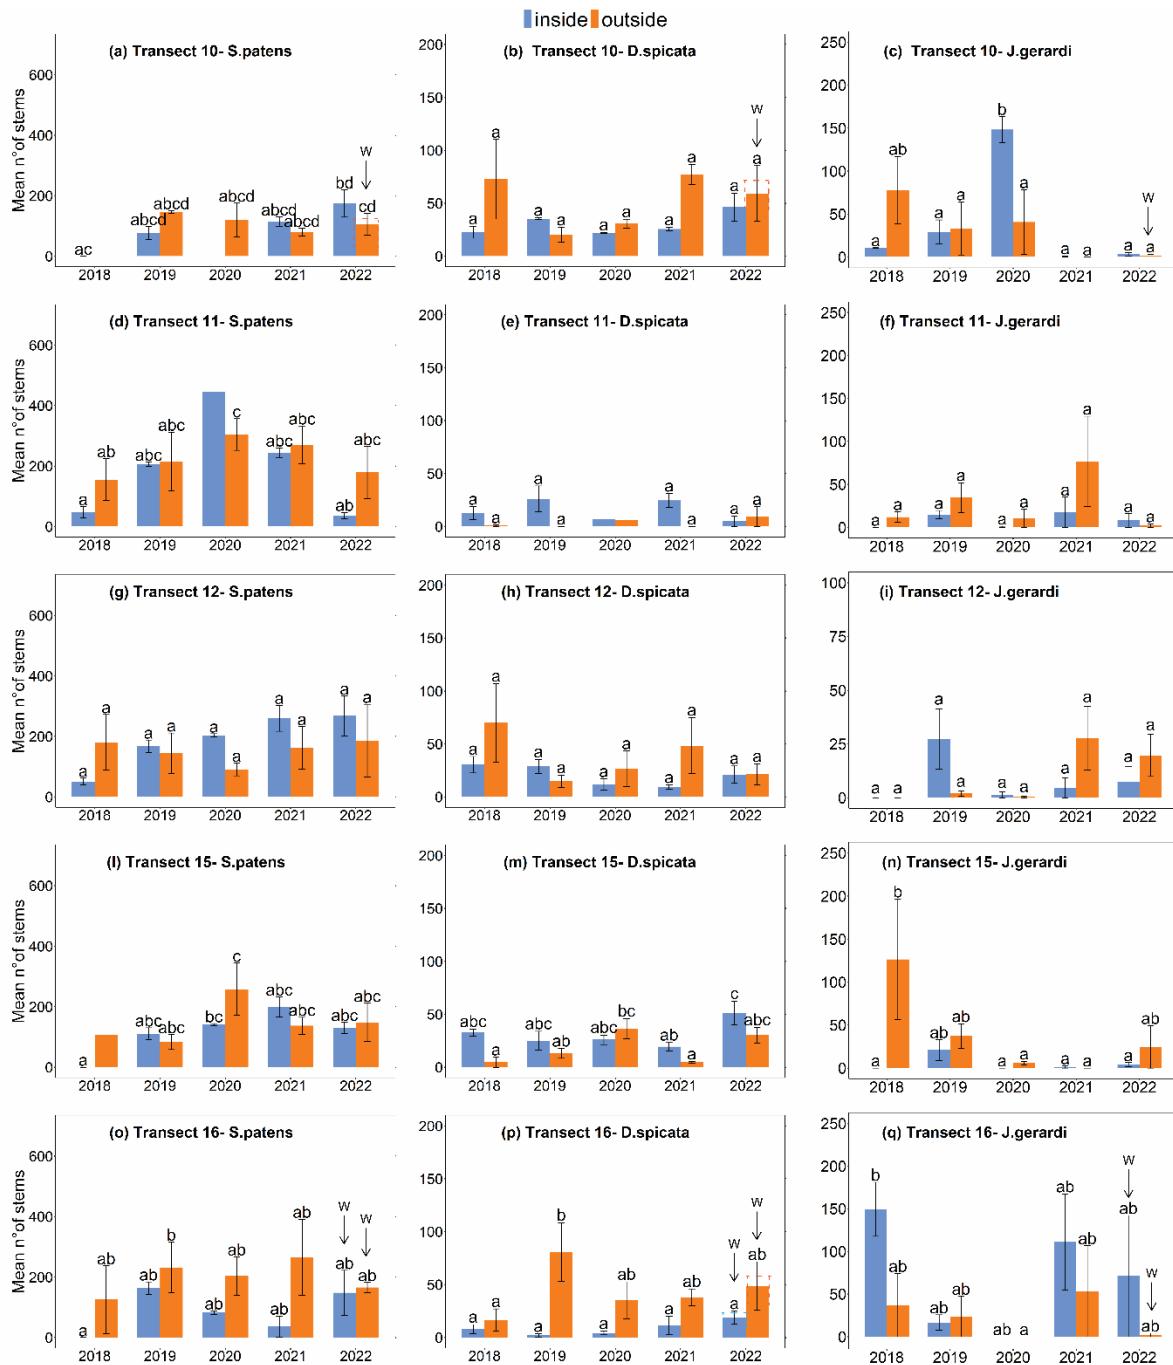

Figure S6: Number of stems of *Spartina patens*, *Distichlis spicata* and *Juncus gerardi* inside and outside the sediment patch of transect 10, 11, 12, 15 and 16. Letters over the bars identify post-hoc Tukey test results. W identifies wrack presence and dotted lines correspond to the values without plots affected by wrack.

*Table S1: Summary results of two-way ANOVA model for number of stems of *Spartina patens* outside and inside over years for each patch: stems~position+year+position:year. Position and year are main effects and position:year represents the interaction. Bold text is used to identify significant difference in the levels of each effect.*
