Supplement.

Table S1. Count data for the great hammerhead shark *Sphyrna mokarran* collected during the bait experiment. The table includes the behavioral interactions associated with each individual shark (Shark number) for each experimental region. These interactions are visits (V), avoidances (A), and feedings (F). 'No reactions' was not included in the table as this is the complement event

Table S2. Count data for the great hammerhead shark *Sphyrna mokarran* collected during the barrier experiment. The table includes the behavioral interactions associated with each individual shark (Shark number) for each experimental region. These interactions are visits (V), avoidances (A), entrances (E), and pass arounds (PA). ‘No reactions’ was not included in the table as this is the complement event
