

The rarefaction curves (Fig. S1) based on the OTUs show that all the gut content samples tended to approach the saturation plateau.

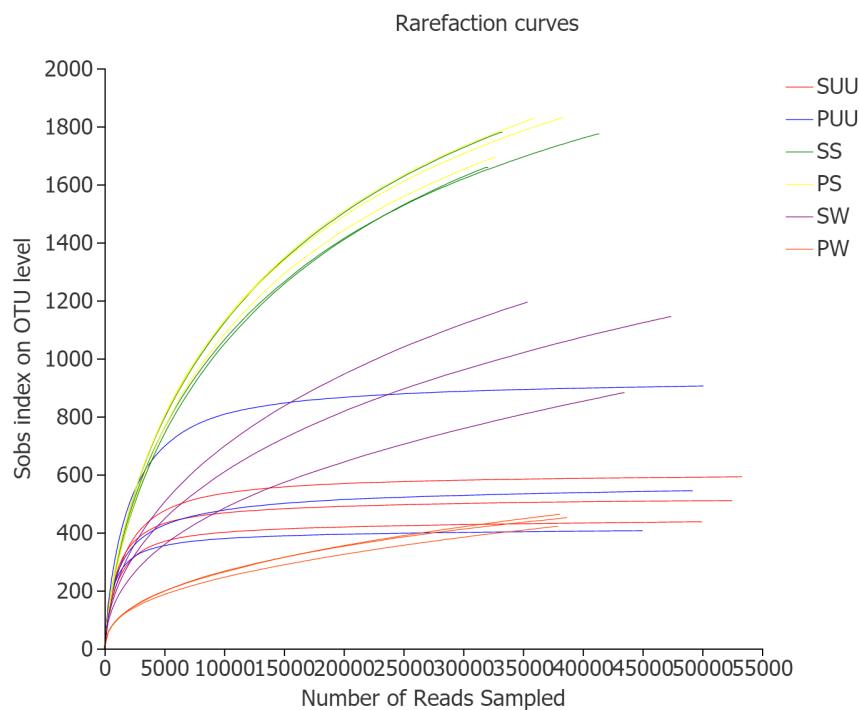

Fig. S1. Rarefaction analysis of different samples from the gut of *Urechis unicinctus* and the two different habitats. Rarefaction curves of OTUs clustered for a dissimilarity of 3%.

The Venn diagrams are presented in Fig. S2. The total OTU numbers in the pond samples was 3389. The common OTU number was 146, only 4.15% of all the OTU. The special OTU number in the PS was highest of 1655. The special OTU number of PUU was 1009, which of 73% of the OTUs in PUU. The total OTU number in the sea samples was 5069 with the common OTU number of 123. Similarly, the highest special OTU number was 1106 of SS. The total OTU number was 9728 among all the samples, of which the common OTU number was 52. While the special OTU number in PUU and SUU was 672 and 550, which was higher than that in sea water and sea sediments samples. The special OTU in PW was lowest, only 32 OTUs.

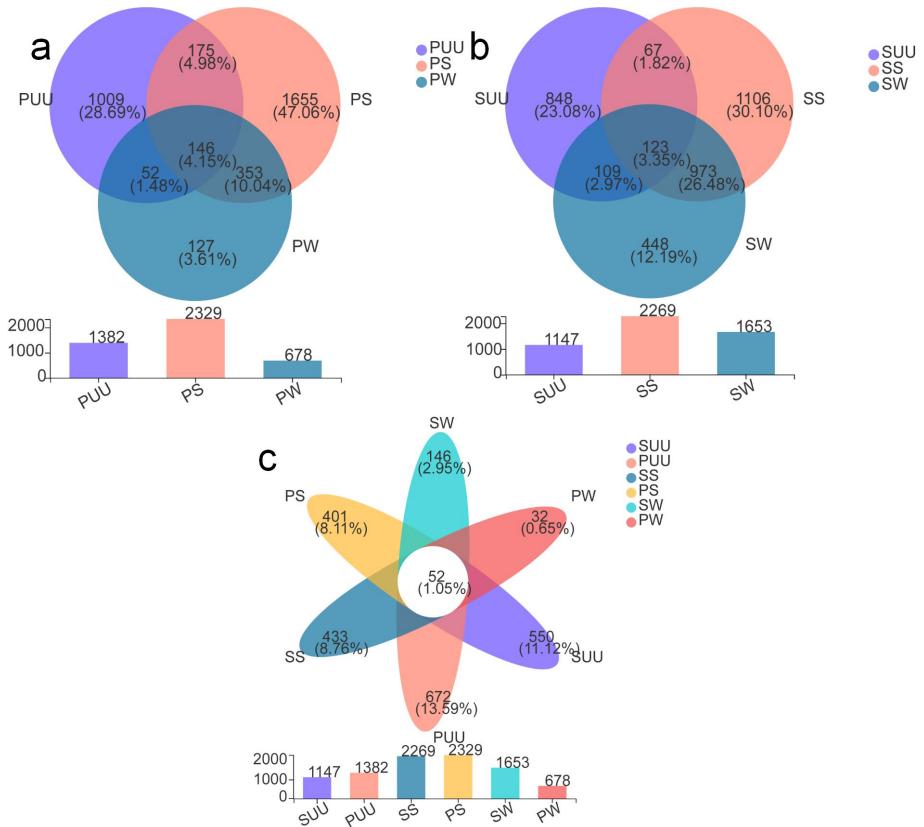

Fig. S2. Venn diagram of OTUs in (a) the pond samples, (b) the sea samples, and (c) all samples.

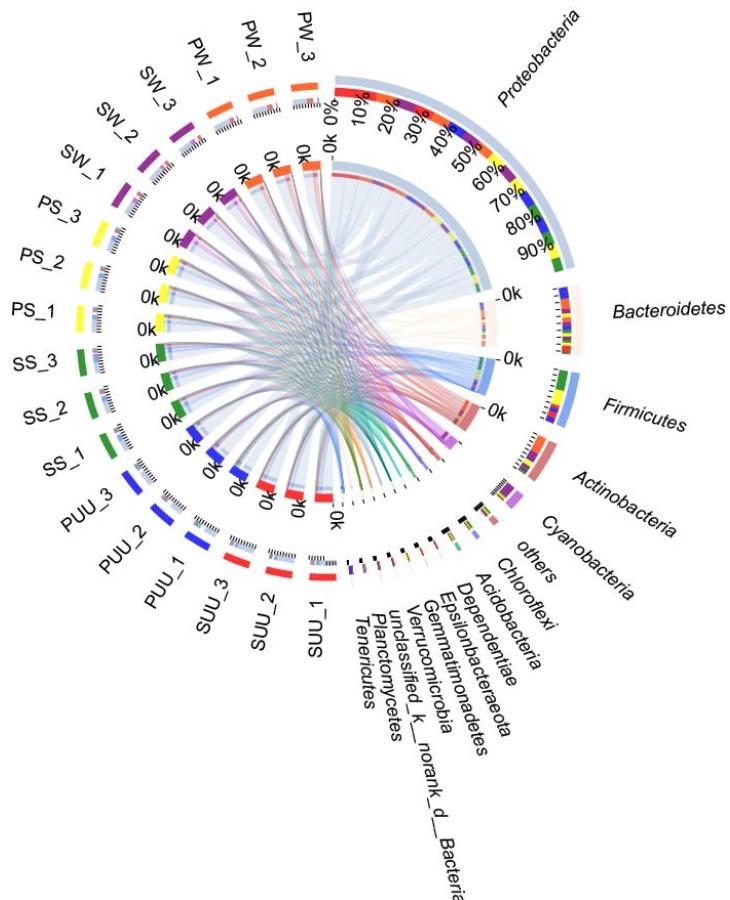

Fig. S3. The Circos diagram of the relationship between samples and species on the phylum level.

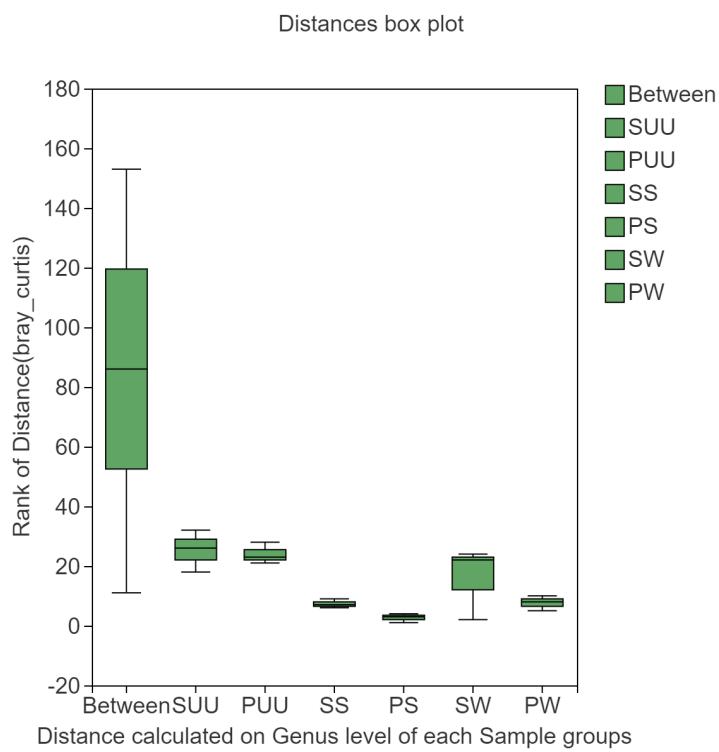

Fig. S4. ANOSIM analysis of all the samples on genus level.

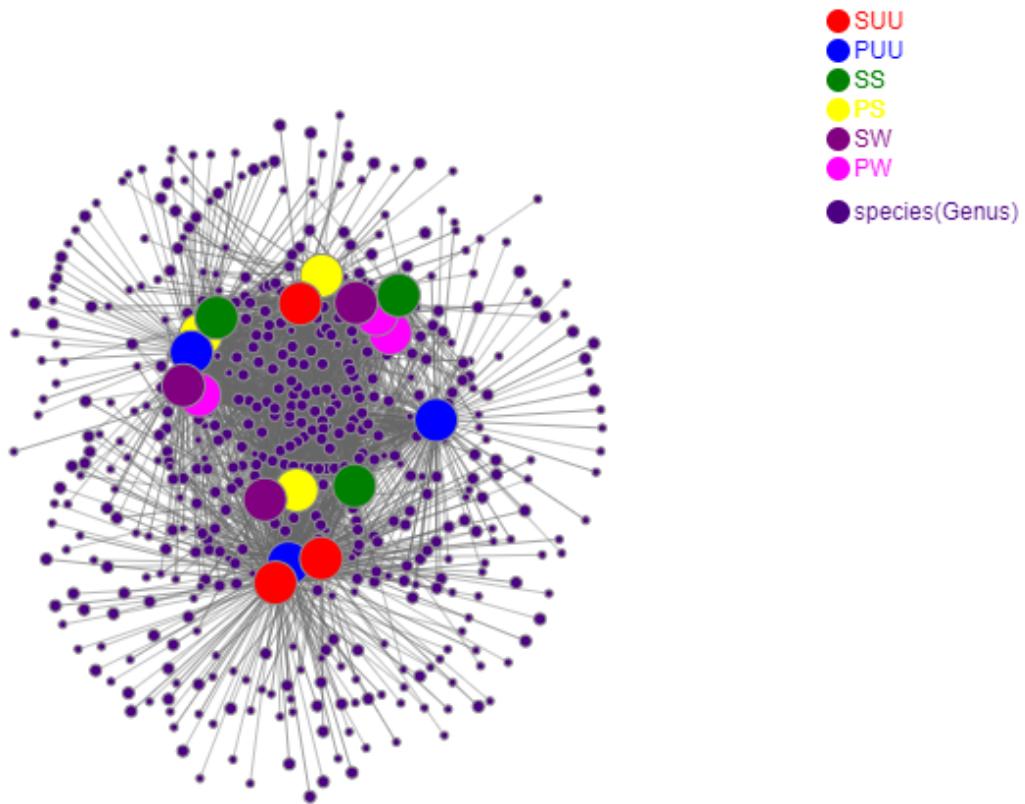

Fig. S5. Network analysis between the samples and the species on genus level.

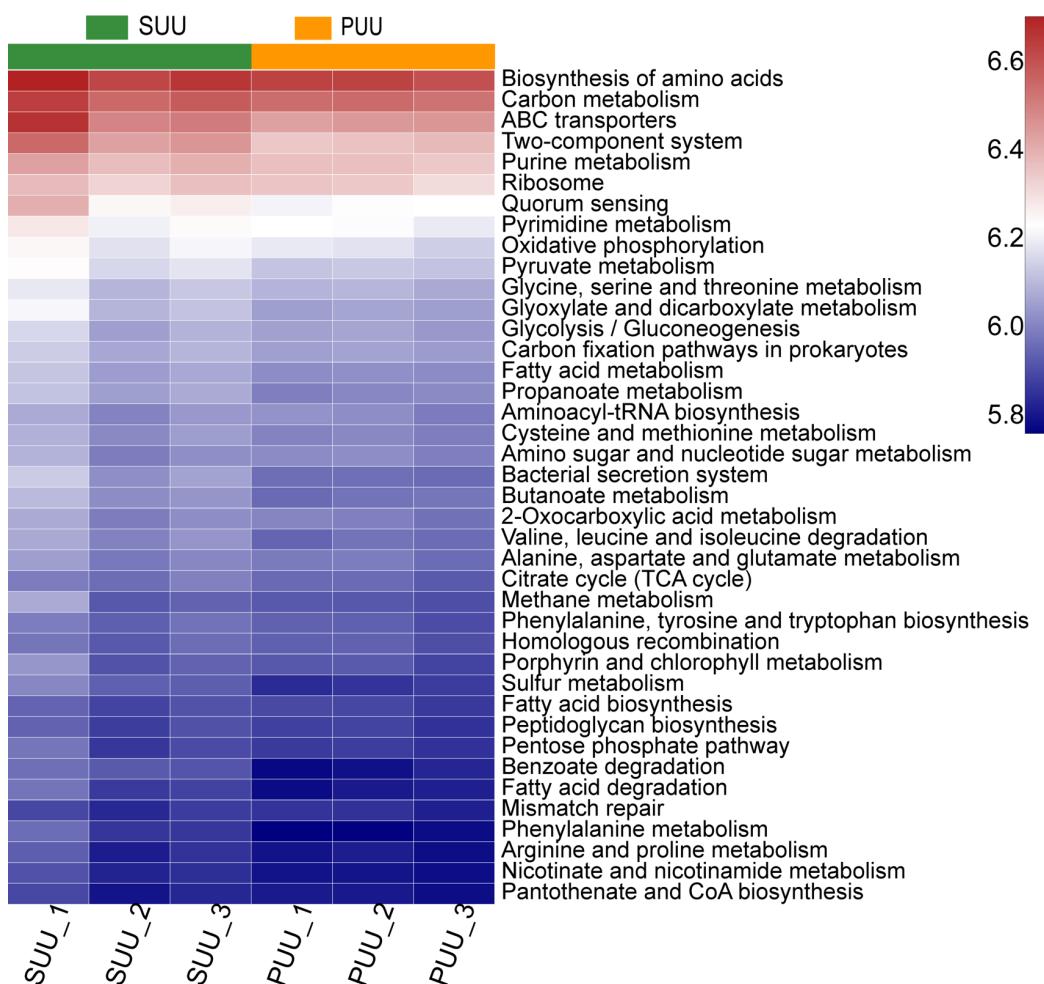

Fig. S6. Heatmap profiles showing the functional categories (KEGG level 3) of bacterial communities as predicted by PICRUSt analysis. Rows represent the 40 KEGG Orthology (KO) functions, columns represent the 6 samples, and the color intensity in the heatmap represents the relative abundance (log) of the functional genes.

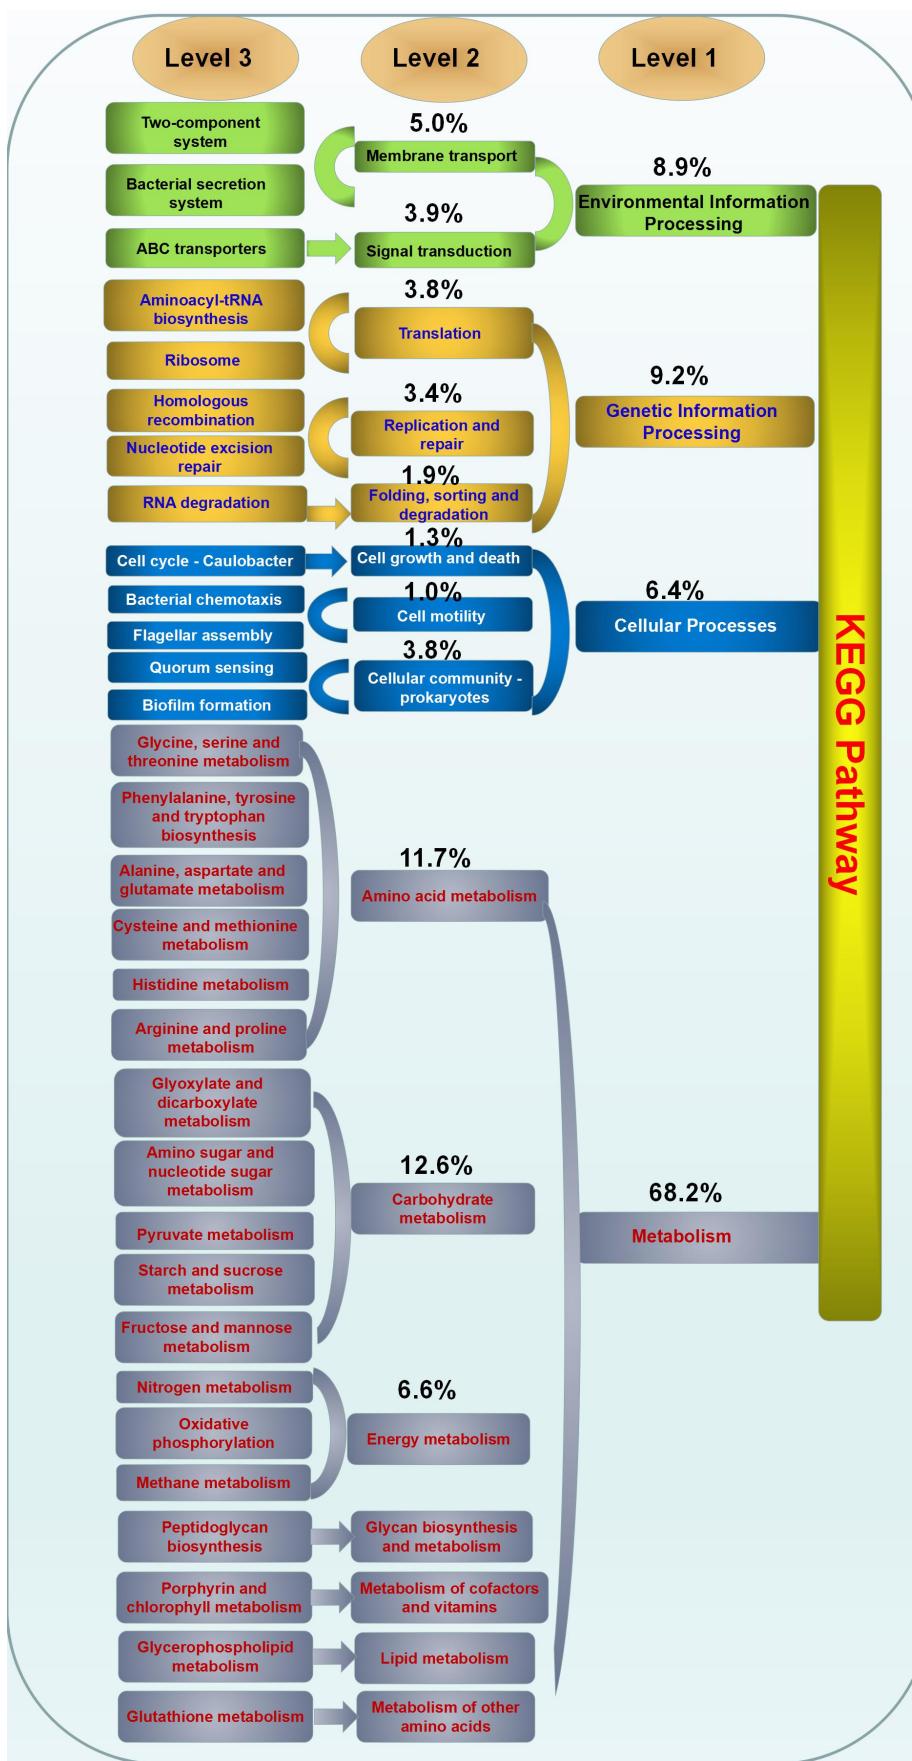

Fig. S7. The main KEGG pathways of the intestinal flora

Table S1. COG analysis of gut microbes.
