

THEME SECTION

Seabird responses to a changing Bering Sea

Idea: G. L. Hunt Jr., A. S. Kitaysky

Editors: K. Elliott, R. Wilson

Marine Ecology Progress Series Vol. 593, pages 187–274

This Theme Section explores how seabirds inhabiting the southeastern Bering Sea region respond to oceanographic variability, including the timing of sea-ice retreat. It combines both colony-based and pelagic studies of seabirds, spanning a period of 100 years and an immense oceanographic region.

CONTENTS

Kitaysky AS, Hunt GL Jr

INTRODUCTION: Seabird responses to a changing Bering Sea 189–194

Kokubun N, Takahashi A, Paredes R, Young RC, Sato NN, Yamamoto T, Kikuchi DM, Kitaiskaia EV, Ito M, Watanuki Y, Will AP, Lauth R, Romano MD, Kitaysky AS

Inter-annual climate variability affects foraging behavior and nutritional state of thick-billed murre breeding in the southeastern Bering Sea 195–208

Hunt GL Jr, Renner M, Kuletz KJ, Salo S, Eisner L, Ressler PH, Ladd C, Santora JA

Timing of sea-ice retreat affects the distribution of seabirds and their prey in the southeastern Bering Sea 209–230

Orben RA, Kokubun N, Fleishman AB, Will AP, Yamamoto T, Shaffer SA, Paredes R, Takahashi A, Kitaysky AS

Persistent annual migration patterns of a specialist seabird 231–245

Will AP, Kitaysky AS

Variability in trophic level and habitat use in response to environmental forcing: isotopic niche dynamics of breeding seabirds in the southeastern Bering Sea 247–260

Will AP, Kitaiskaia EV, Kitaysky AS

Red-legged kittiwake feathers link food availability to environmental changes in the Bering Sea 261–274
